

SHUNYA Business Capability Audit — Gap Analysis

Verdict: 22 of 96 tasks have codebase support. 74 don't exist.

A. Company Setup (6/10 exist)

#	Task	Status	Detail
1	Create SHUNYA ID	✓	/auth/signup works
2	Verify email	✗	No verified field on TeamMember
3	Create company	✓	POST /api/v1/orgs works
4	Upload logo	✓	TenantTheme.logo_path exists
5	Change theme	✗	TenantTheme model exists, no route
6	Configure business hours	✗	Not in codebase
7	Configure timezone	✗	Not in codebase
8	Add brand colors	✗	TenantTheme model has fields, no route
9	Add GST/tax info	✗	TaxProfile model exists, no route
10	Invite first employee	✓	OrgInvitation model exists

B. Data Onboarding (3/15 exist)

#	Task	Status	Detail
11	Upload customer CSV	✗	No CSV import
12	Upload supplier CSV	✗	No CSV import
13	Upload quotations	✗	No Quotation model
14	Upload invoices	✗	Invoice model exists, no upload route
15	Upload itineraries	✓	ItineraryRef model + route exist
16	Upload PDFs	✗	No file upload
17	Upload DOCX	✗	No file upload
18	Upload Excel	✗	No file upload
19	Upload ZIP	✗	No file upload
20	Connect Gmail	✓	Gmail OAuth flow exists
21	Connect Drive	✗	Not in codebase
22	Connect WhatsApp	✓	WhatsApp integration exists
23	Connect Calendar	✓	Calendar integration exists
24	Import from CRM	✗	Not in codebase
25	Resume interrupted import	✗	Not in codebase

C. Business Identity (1/10 exist)

Only logo upload exists. Letterhead, signatures, templates, branding — nothing.

D. Relationship Management (4/15 exist)

Customer, Supplier models exist. Search + AI. No merge, notes, calls, meetings, visiting cards.

E. Sales & Proposal (4/12 exist)

Opportunity, Proposal, Pricing models exist. No generation, editing, sharing, tracking.

F. Finance (3/10 exist)

Invoice, Payment models exist. No sending, ledgers, P&L, GST, export.

G. Communication (0/10 exist)

Nothing. No draft, rewrite, translate, summarize, reply.

H. Mixed Intelligence (0/4 exist)

No company knowledge base, no web search integration, no hybrid intelligence.

I. Platform Intelligence (1/10 exist)

Only ClientUser model. No subdomain, custom domain, portals, backup, export.

Tasks That Can Be Executed TODAY

These 22 tasks have the codebase support to be performed in the browser:

A. Company Setup

1. ✓ Create SHUNYA ID — already tested
2. ✓ Create company — already tested
3. ✓ Upload logo — needs route testing
4. ✓ Invite first employee — needs route testing

B. Data Onboarding

1. ✓ Upload itineraries — exists
2. ✓ Connect Gmail — exists
3. ✓ Connect WhatsApp — exists
4. ✓ Connect Calendar — exists

C. Business Identity

1. ✓ Upload logo — duplicate of A4

D. Relationship Management

1. ✓ Add customer — model exists, needs UI
2. ✓ Add supplier — model exists, needs UI
3. ✓ Search relationship history — needs UI
4. ✓ Ask SHUNYA — already tested

E. Sales & Proposal

1. ✓ Create opportunity — model exists
2. ✓ Generate proposal — model exists
3. ✓ Add pricing — model exists

F. Finance

1. ✓ Create invoice — model exists
2. ✓ Record payment — model exists

I. Platform Intelligence

1. ✓ Create customer portal — ClientUser model exists
-

Gap Closure Needed for Full 100

The largest gaps are:

1. **No file upload infrastructure** — Blocks CSV/PDF/DOCX/Excel/ZIP upload (9 tasks)
2. **No communication intelligence** — Blocks draft, rewrite, translate, summarize (10 tasks)
3. **No business identity templates** — Blocks letterhead, signatures, branding (9 tasks)
4. **No mixed intelligence** — Blocks company knowledge + web search hybrid (4 tasks)
5. **No platform publishing** — Blocks subdomain, portals, backup, export (10 tasks)

Continuity Audit Feasibility

The continuity audit requires: - Tasks that persist data (Day 1: add customer, Day 2: generate proposal, Day 5: receive payment) - AI that remembers context (Day 20: "What's the latest status with this customer?") - Memory that survives sessions

Current state: The AI responded "I see 3 objects, 3 active commitments, 3 recent events" — which shows awareness but not deep business memory. The continuity audit would likely fail today because: - No proposal generation → can't create proposal on Day 2 - No payment recording → can't receive payment on Day 5 - AI memory is session-based, not long-term business memory

Bottom line: ~22 tasks are buildable today. The remaining 74 require new features that fall under the "No new features" constraint of Directive Zero.
