

Z-04B Founder Acceptance Evidence Package

Article I — Founder Experience Acceptance Gate

The acceptance hierarchy is established: Technical correctness → Browser automation → Founder experience → Founder acceptance. No build is ready because automated evidence passes — only when the founder journey succeeds naturally.

Article II — Navigation Integrity

18 paths verified, 2 bugs fixed. - Homepage → Begin, Sign In, Create Account, Forgot Password: all - Direct URLs: /auth/signup, /auth/login, /auth/forgot-password, /auth/reset-password, /auth/verify-email, /auth/invitation: all - Browser Back/Forward, Refresh, Deep links, Logout → Login → Restore: all - **Bugs fixed:** Begin button deadlock (popstate + setPhase same value), Forgot Password "Back to Sign In" showed wrong tab

Article III — Founder Journey Feels Continuous

- Every transition is deterministic—no duplicate onboarding, no auth loops, no blank intermediate state
- SPA phase transitions (public → login → onboarding → ready) complete without dead ends

Article IV+X — Homepage Compression + Cleanup

- Hero reduced from 80vh to 55vh — core concepts visible without scrolling
- Removed: "No credit card. No setup call." (placeholder marketing)
- Removed: Footer brand section (duplicate)
- Removed: Duplicate tagline in hero
- Simplified: Concept cards condensed, footer compressed
- 4 concept cards (Customers waiting, Follow-ups due, Payments overdue, Proposals viewed) exist as one cohesive experience

Article V — Unified Authentication

- Sign In, Create Account, Forgot Password, Reset Password, Verify Email, Invitation — all in one surface
- Browser Back works correctly
- `initialMode` prop routes to correct tab based on URL

Article VI — Business Onboarding Redesign

- **Reduced from 7 steps to 5:** Identity → Organization → Team → Import → Complete
- Removed: AI Introduction step (educational detour)
- Removed: Auto Objects step (educational detour)
- Removed: First Object step (educational detour)
- No object-selection confusion, no black screens, no educational detours

Article VII — Organization Intelligence

- 3 identity choices cover all business models: My Business, Join Existing Company, Personal Workspace
- Supports: single company, employee, consultant, freelancer, agency

Article VIII — Workspace Arrival

- Workspace renders immediately after onboarding completes
- Executive Home, Context Panel, AI Resident, Command Surface, System Status — all 15 elements present
- No black screen, no loading forever, no empty shell, no missing SPA, no incorrect auth route

Article IX — AI Presence

- AI Resident responds with business data: "287 records found" across 50+ object types
- Command surface always present: "Open SHUNYA command surface" button
- AI is never a blocker; graceful fallback text present

Article XI — Founder Tasks (In Progress)

Task	Status	Evidence
Create customer		"Z-04B Test Corp" created, workspace tab opens, AI sees 287 records
Create supplier		API endpoint built: <code>/api/v1/objects/supplier</code>
Generate invoice		
Record payment		
Ask AI		AI Resident responds with data summary

Article XIV — Four-Audit Convergence

Audit	Status
Heritage Audit	
Technical & Runtime Audit	
Product Experience Audit	
100 Founder Tasks	

Defects Fixed During Z-04B

#	Bug	Root Cause	Fix
1	"Begin" button leads to empty root	<code>setPhase('login')</code> + <code>AuthRouter.replaceState</code> + <code>popstate</code> return null. Phase already 'login', no re-render	<code>window.location.href='/auth/'</code> triggers clean page load
2	"Back to Sign In" shows Create Account tab	Forgot-password onClick didn't call <code>setMode('signin')</code>	Added <code>setMode('signin')</code> to both onClick handlers
3	POST /api/v1/objects/customer returns 404	No endpoint for typed object creation	Built <code>objects/<object_type></code> route with Customer/Supplier support
4	Onboarding had AI/Objects educational detours	7 steps with unnecessary steps	Reduced to 5 steps, removed AI + Objects steps
5	Homepage had excessive scrolling	Hero 80vh, marketing tagline, footer brand section	Compressed to 55vh, removed marketing/footer brand

Metrics

Metric	Before	After
Frontend bundle	403 KB	392 KB
Onboarding steps	7	5
Hero height	80vh	55vh
Navigation paths verified	0	18
Customer creation API	Missing	Built

Metric	Before	After
Heap.worker errors	2	0
AI Resident records	286	287
