

Constitutional Execution Queue — Reconciliation Report (EX-01)

CEP-001 Status: APPROVED — CONVERGENCE COMPLETE **Score:** Navigation Constitution violation fix **Results:** −13 lines, −1 ownership point, −11 route entries, context preserved, cognition continuous

Scoring Model (EX-01)

Factor	Weight	Description
Constitutional Correctness	Mandatory	Does it satisfy or restore constitutional truth?
Founder Experience	Highest	What will the founder immediately notice?
Product Evolution	High	Does it make SHUNYA feel more like a living OS?
Repository Simplification	Medium	How much architectural duplication disappears?
Technical Risk	Constraint	Migration complexity, rollback complexity, regression risk

Queue balancing: Experience CEP → Infrastructure CEP → Experience CEP → Infrastructure CEP

Candidate CEPs — Evaluated and Ranked

CEP-002 — AI Presence Consolidation ★ RECOMMENDED

Factor	Score	Analysis
Constitutional	✔ Mandatory satisfied	Canonical Ownership Law §10: duplicates <code>ai-copilot.tsx</code> vs <code>ai-presence-panel.tsx</code>
Founder Experience	⚡ VERY HIGH	Founder will immediately see continuous AI thinking instead of intermittent presence
Product Evolution	HIGH	Makes SHUNYA feel continuously alive — AI is always present, always thinking
Repository Simplification	−1 file, −1 owner	Remove <code>copilot/ai-copilot.tsx</code> (10-15% of experience panel surface)
Technical Risk	LOW	<code>ai-copilot.tsx</code> has few consumers; <code>ai-presence-panel.tsx</code> is already canonical
Category	Experience Multiplier	Directly increases the "living OS" feeling

Why CEP-002 and not Event Bus: Event Bus is invisible infrastructure. EX-01 explicitly weights founder experience highest. AI Presence consolidation makes SHUNYA feel **more alive immediately** — the founder sees continuous cognition rather than an intermittent panel. Queue balance: CEP-001 improved navigation (experience), CEP-002 improves AI presence (experience), then CEP-003 balances with infrastructure.

CEP-003 — Event Bus Consolidation

Factor	Score	Analysis
Constitutional	✔ Mandatory satisfied	Duplicate runtime ownership: 3 event buses → 1
Founder Experience	⚡ LOW	Invisible to founder — internal plumbing
Product Evolution	LOW	Enabling — unblocks SSE migration which is visible
Repository Simplification	−2 files, −2 owners	Remove <code>api/event-bus.ts</code> , <code>lib/event-bus.ts</code>
Technical Risk	LOWEST	Dead file (zero imports) + 3 consumer migrations using proven pattern
Category	Invisible Infrastructure	Lowest risk CEP; enables SSE future

CEP-004 — Command Surface Consolidation

Factor	Score	Analysis
Constitutional	✔ Mandatory satisfied	Duplicate ownership: 3 command surfaces → 1
Founder Experience	⚡ VERY HIGH	One consistent command surface — no mode confusion
Product Evolution	HIGH	Unified command experience strengthens the living OS feel
Repository Simplification	−2 files, −2 owners	Remove <code>executive-home/cs.tsx</code> , <code>ai/command-bar.tsx</code>
Technical Risk	MEDIUM	<code>executive-home/cs.tsx</code> consumed by <code>executive-home.tsx</code> ; migration requires consumer update
Category	Experience Multiplier	Directly visible; reduces cognitive load

CEP-005 — Notification Unification

Factor	Score	Analysis
Constitutional	✔ Mandatory satisfied	3 notification systems → 1 canonical (NotificationContext)
Founder Experience	⚡ HIGH	Calmer, consistent notifications — no duplicate or conflicting alerts
Product Evolution	MEDIUM	Reduces noise, increases calm — part of "living OS" feel
Repository Simplification	−2 files, −2 owners	Remove inline WorkspaceBar notifications, Mantine duplication
Technical Risk	MEDIUM	WorkspaceBar notification fetch → NotificationContext merge
Category	Experience Multiplier	Reduces cognitive load from notification noise

CEP-006 — SSE / Event Stream Unification

Factor	Score	Analysis
Constitutional	✔ Mandatory satisfied	Universal Event Law §14 — single event stream vs 7 polling loops
Founder Experience	⚡ HIGH	Data becomes continuous — no more "wait 15s" gaps
Product Evolution	VERY HIGH	Continuous stream makes SHUNYA feel alive vs polled web app
Repository Simplification	−7 polling loops, −2 hook files	All independent polling replaced by SSE subscription
Technical Risk	HIGH	Requires backend SSE endpoint + frontend consumer migration
Category	Foundational	Architectural leverage — unblocks real-time across all surfaces

CEP-007 — Static Route Cleanup

Factor	Score	Analysis
Constitutional	✔ Mandatory satisfied	Simplicity Rule §4 — replace 8 bespoke routes with 1 generic
Founder Experience	⚡ LOW	Invisible
Product Evolution	LOW	Internal cleanup
Repository Simplification	−7 route functions, 0 files	Replace 8 route functions with generic catch-all (already done for new PDFs)
Technical Risk	LOW	Routes already tested; backward compat maintained
Category	Invisible Infrastructure	Already partially complete

CEP-008 — Fetch Auth Consolidation

Factor	Score	Analysis
Constitutional	✔ Mandatory satisfied	Duplicate API client: <code>client.ts</code> vs <code>fetch-with-auth.ts</code>
Founder Experience	⚡ LOW	Invisible — internal API pattern
Product Evolution	LOW	No visible change
Repository Simplification	−1 file	Remove <code>api/fetch-with-auth.ts</code>

Technical Risk	LOW	Few consumers; <code>client.ts</code> is canonical
Category	Invisible Infrastructure	Cleanup

CEP-009 — Continuous Cognition Panel (New)

Factor	Score	Analysis
Constitutional	✔ Mandatory satisfied	Continuous Cognition (\$1.5) — expose what SHUNYA is thinking
Founder Experience	⚠ VERY HIGH	Founder sees real-time AI reasoning, confidence, alternatives, unknowns
Product Evolution	VERY HIGH	The defining "living OS" feature — continuous visible thinking
Repository Simplification	0 files	New capability, not deletion. Constitutional requirement exposed
Technical Risk	LOW	Builds on existing <code>ai-presence-panel.tsx</code> canonical component
Category	Experience Multiplier	Highest direct impact on founder's perception of SHUNYA as alive

CEP-010 — Engine Consolidation (Cognitive → Intelligence)

Factor	Score	Analysis
Constitutional	✔ Mandatory satisfied	12+ engine classes → unified under Intelligence
Founder Experience	⚡ LOW	Invisible — internal architecture
Product Evolution	LOW	No visible change
Repository Simplification	−3 engine files, −2 directories	Merge <code>cognitive/exec_intelligence</code> into <code>intelligence/</code>
Technical Risk	MEDIUM	Requires verifying all engine consumers
Category	Invisible Infrastructure	High leverage but invisible

Revised Constitutional Execution Queue

Rank	CEP	Category	Experience	Risk	Simplification	Score Rationale
1	CEP-002 — AI Presence	Experience Multiplier	⚠ VERY HIGH	LOW	−1 file	Highest experience impact at lowest risk
2	CEP-003 — Event Bus	Infrastructure	⚡ LOW	LOWEST	−2 files, −2 owners	Cleanest infra CEP; balances queue
3	CEP-004 — Command Surface	Experience Multiplier	⚠ VERY HIGH	MED	−2 files, −2 owners	High experience, enables Navigation \$15 completion
4	CEP-006 — SSE Unification	Foundational	⚠ HIGH	HIGH	−7 polls, −2 hooks	Largest architectural leverage
5	CEP-005 — Notification	Experience Multiplier	⚠ HIGH	MED	−2 files, −2 owners	Calm improvement, reduces noise
6	CEP-009 — Cognition Panel	Experience Multiplier	⚠ VERY HIGH	LOW	0 files	Pure experience — makes OS feel alive
7	CEP-007 — Route Cleanup	Infrastructure	⚡ LOW	LOW	−7 routes	Cleanup; mostly done
8	CEP-008 — Fetch Auth	Infrastructure	⚡ LOW	LOW	−1 file	Cleanup
9	CEP-010 — Engine Consolidation	Infrastructure	⚡ LOW	MED	−3 files	Long-term simplification
10	CEP-0XX — Auth/Identity	Foundational	⚡ LOW	HIGH	−4 systems	Highest risk; needs careful planning

Queue balancing pattern: Experience → Infra → Experience → Infra → Experience → Infra → Experience → Infra...

CEP Classification

Quick Wins (high experience, low risk)

- **CEP-002 — AI Presence Consolidation** ★
- **CEP-009 — Continuous Cognition Panel** (no deletion needed, purely additive)

Foundational CEPs (high architectural leverage)

- **CEP-006 — SSE Unification** (unlocks real-time across all surfaces)
- CEP-010 — Engine Consolidation

Invisible Infrastructure CEPs

- CEP-003 — Event Bus
- CEP-007 — Route Cleanup
- CEP-008 — Fetch Auth

High-Risk CEPs

- CEP-006 — SSE (HIGH risk due to backend + frontend migration)
- CEP-0XX — Auth/Identity (HIGHEST risk — 4 auth systems)

Experience Multipliers

- **CEP-002 — AI Presence** (continuous AI thinking)
- CEP-004 — Command Surface (unified commands)
- CEP-005 — Notification (calm)
- CEP-009 — Cognition Panel (living OS feel)

Recommended CEP-002

AI Presence Consolidation

Field	Value
Constitutional Objective	Eliminate duplicate canonical ownership of AI Presence
Constitutional Articles	Canonical Ownership Law §10, Simplicity Rule §4
Founder Journey	All journeys — AI presence is universal
Living Objects	All — AI thinks about everything
Experience Improvement	Founder sees continuous AI cognition instead of intermittent panel
Canonical Runtime	Continuous Cognition
Canonical Owner	<code>living-workspace/ai-presence-panel.tsx</code>
Legacy	<code>copilot/ai-copilot.tsx</code>
Repository Simplification	−1 file, −1 ownership point
Risk	LOW — canonical already wins; legacy has few consumers
Estimated Effort	Small — verify consumers, migrate, remove legacy
Dependencies	None (standalone)
Unlocks	Continuous Cognition Panel (CEP-009) — built on canonical AI presence
Acceptance Gates	\$23 Gates 4, 13, 17, 22
Constitutional Ranking	1st — highest experience impact at lowest risk

Position change from previous recommendation: Moved ahead of Event Bus. Rationale: EX-01 prioritizes founder experience above repository simplification. AI Presence makes SHUNYA feel alive immediately; Event Bus is invisible plumbing.
