

LX-06

Architectural Convergence

One Reality · One Intelligence · One Workspace · One Experience

Prepared: August 05, 2026

Classification: P0 — Constitutional Execution Directive

LX-06 is a convergence phase, not a feature phase. The objective is architectural consolidation: every capability shall feel like one continuously living operating system rather than multiple excellent subsystems. This report documents every architectural duplication, classifies every runtime, defines the convergence path, and measures complexity reduction. No new frontend, runtime, store, provider, component, or route may be introduced if an existing canonical implementation can be extended instead.

Current state: 25 duplicate pairs across the frontend. 52 runtimes across the full stack. 0 of 17 constitutional gates fully satisfied. LX-06 begins at high duplication.

1. Constitutional Principle Compliance

Status of all 17 LX-06 principles. Green = satisfied, Red = not satisfied, Yellow = partial.

Principle	Status	Details
1. One Reality Runtime	■ ■	Reality Engine is canonical. But multiple polling sources exist: living-store polls /api/v1/reality, useAIPresence polls /api/v1/ai/insights, useRealtimeSync polls /api/events. Need single authoritative reality source.
2. One AI Presence	■	Two AI presence sources: useAIPresence hook (legacy polling) and AI Presence Panel (Zustand-store based). AI Presence Panel is canonical; hook must merge in.
3. One Command Surface	■	Three command entry points: AICommandBar (legacy, in homepage), CommandPalette (legacy, modal), Living CommandSurface (canonical). Only CommandSurface survives.
4. Living Objects Everywhere	■ ■	LivingObjectCard exists but only 8 types have object-specific panels. 26+ object types exist in the system. Need universal Living Object rendering.
5. Founder Attention Runtime	■	No attention runtime exists yet. living-store tracks basic interaction counts but no hover, scroll, revisit, or hesitation tracking. Must be built.
6. Continuous Cognition	■ ■	AI Presence Panel shows observations and recommendations. But is not always visible (sidebar collapsible). Must be permanently visible.
7. Adaptive Workspace	■	Living Workspace has static layout. No adaptation based on reality, attention, execution, or urgency. Must be built.
8. Zero Navigation	■ ■	Command Surface enables zero-navigation interaction. But legacy spaces still require clicking through a grid. Living Objects reduce this.
9. Route Convergence	■	Two routes serving different experiences (/ , /living). Duplicate workspace implementations. Must converge to single / serving Living.
10. Runtime Convergence	■ ■	52 runtimes cataloged: 33 Canonical, 18 Duplicate/Legacy. Duplicates must merge, delegate, or delete.
11. Experience Compression	■ ■	5 of 7 journeys show compression. 2 journeys not yet ported. Need complete coverage.
12. Continuous Ownership	■	Outcome engine completes and stops. No "continuing to watch" mechanism exists. Must be built.
13. Universal Trust	■	AI Presence shows confidence scores but no evidence, reasoning, alternatives, or rollback. Must be expanded.
14. Interaction Memory	■	No session restoration or workspace state persistence. Living store resets on refresh. Must persist to backend.
15. Eliminate Architectural Duplication	■	25 duplicate pairs identified across frontend. 14 need deletion, 11 need merge. Zero duplications must survive.
16. Experience Before Architecture	■ ■	MX-01A audits established founder perspective. But each convergence action must pass the "what becomes easier?" test.
17. Constitutional Acceptance Gates	■	0 of 17 gates fully satisfied. All must be green before LX-06 closes.

0 of 17 gates fully satisfied. 4 partial. 13 not compliant. Significant work required.

2. Runtime Consolidation Matrix

Every runtime across frontend and backend classified per LX-06 Principle 10: Canonical (keep as-is), Duplicate (merge into canonical), Legacy (delegate until retired), Experimental (may become canonical), or Dead (delete). Action: Keep, Merge, Delegate, or Delete.

Runtime	Location	Classification	Action
Reality Engine (backend)	app.reality_engine.engine	Canonical	Keep
Reality Store (frontend)	living-store.ts (fetchReality)	Canonical	Keep
useReality hook	living-workspace/use-reality.ts	Canonical	Keep
useAIPresence hook	api/use-ai-presence.ts	Duplicate	Merge into AI Presence Panel
AI Presence Panel (Living)	living-workspace/ai-presence-panel.tsx	Canonical	Keep
AI Command Bar (legacy)	ai/command-bar.tsx	Duplicate	Delegate to Command Surface
Command Palette (legacy)	ai/command-palette.tsx	Duplicate	Delete
Command Surface (Living)	living-workspace/command-surface.tsx	Canonical	Keep
Executive/executive-home	executive-home/ + executive/	Duplicate	Merge into Living
LivingWorkspace (canonical)	living-workspace/living-workspace.tsx	Canonical	Keep
LivingWorkspace (workspace/)	workspace/living-workspace.tsx	Duplicate	Merge into canonical
WorkspaceContainer	workspace/workspace-container.tsx	Legacy	Delegate to Living
WorkspaceBar	workspace/workspace-bar.tsx	Duplicate	Delegate to Living TopBar
Legacy HomePage/UnifiedOS	public/homepage.tsx	Duplicate	Delete after migration
WorkspaceProvider (context)	context/WorkspaceContext.tsx	Duplicate	Merge into Living store
Living Store (zustand)	living-workspace/living-store.ts	Canonical	Keep
Workspace Store (zustand)	runtimes/workspace/store.ts	Duplicate	Merge into Living store
API event-bus	api/event-bus.ts	Duplicate	Merge into runtime event-bus
lib event-bus	lib/event-bus.ts	Duplicate	Delete
Runtime event-bus	runtimes/event-bus.ts	Canonical	Keep
Runtime orchestrator	runtimes/orchestrator.ts	Canonical	Keep
State Fabric	runtimes/state-fabric.ts	Canonical	Keep
Module Registry	runtimes/module-registry.ts	Canonical	Keep
Commitment Runtime	runtimes/commitment/engine.ts	Canonical	Keep
Composition Runtime	runtimes/composition/engine.ts	Canonical	Keep
Conversation Runtime	runtimes/conversation/engine.ts	Canonical	Keep
Experience Runtime	runtimes/experience/engine.ts	Canonical	Keep
Graph Runtime	runtimes/graph/engine.ts	Canonical	Keep
Intelligence Runtime	runtimes/intelligence/engine.ts	Canonical	Keep
Layout Runtime	runtimes/layout/engine.ts	Canonical	Keep
Object Runtime	runtimes/object/engine.ts	Canonical	Keep
Timeline Runtime	runtimes/timeline/engine.ts	Canonical	Keep
Outcome Engine	app.outcome_engine	Canonical	Keep

Runtime	Location	Classification	Action
Reality Engine (backend)	app.reality_engine	Canonical	Keep
Attention Engine	app.cortex.attention	Canonical	Keep
Awareness Engine	app.awareness.engine	Canonical	Keep
Intelligence Runtime	app.intelligence	Experimental	Keep
Execution Runtime	app.execution	Canonical	Keep
Workflow Engine	app.outcome_engine.WorkflowEngine	Canonical	Keep
Celery Worker	app.celery_worker	Legacy	Delegate to OutcomeEngine
Notification Manager	app.notifications	Canonical	Keep
Search (unified)	app.search	Canonical	Keep
Auth (session)	app.auth_routes	Canonical	Keep
Auth (production)	app.production.auth	Duplicate	Merge into auth_routes
Auth (OAuth)	app.auth_oauth	Experimental	Keep
AuthZ (permissions)	app.authz	Canonical	Keep
Calendar Service	app.calendar_service	Canonical	Keep
Communication (email)	app.communication	Canonical	Keep
Communication (WhatsApp)	app.communication	Canonical	Keep
Temporal Runtime	app.temporal	Experimental	Keep
Predictions	app.prediction	Experimental	Keep
Space Runtime	app.space	Experimental	Keep
Cognitive Runtime	app.cognitive	Experimental	Keep
Memory Runtime (knowledge)	app.memory	Canonical	Keep

Classification	Count	Percentage
Canonical	34	63%
Duplicate	12	22%
Legacy	2	4%
Experimental	6	11%
Dead	0	0%

3. Duplicate Elimination Report

Every duplicate pair identified, with canonical survivor and action required. Nothing duplicated survives LX-06. Action: Merge (combine into canonical), Delete (remove entirely), or Delegate (legacy routes to canonical).

Duplicate Pair	Canonical Survivor	Action	Notes
ai/command-bar.tsx + ai/command-palette.tsx	living-workspace/command-surface.tsx	Delete legacy	Command Surface covers all command-bar + palette features
executive-home/executive-home.tsx + executive/	living-workspace/ (Briefing+Stream)	Merge	Legacy executive features absorbed into Living Briefing
workspace/living-workspace.tsx (object detail)	living-workspace/living-workspace.tsx	Merge into canonical	Object detail panels should render inside Living Workspace as LivingObjectCards
workspace/workspace-container.tsx	living-workspace/living-workspace.tsx	Delegate	WorkspaceContainer routes → Living Workspace takes over as canonical router
workspace/workspace-bar.tsx	living-workspace TopBar + CommandSurface	Delegate	All bar features (search, notifications, profile) absorbed into Living
public/homepage.tsx (UnifiedOS)	living-workspace/living-workspace.tsx	Delete after migration	HomePage is the legacy / experience. Living replaces it.
public/unified-os.css	living-workspace/living-styles.css	Delete	unified-os.css only used by HomePage
public/living-os.css	living-workspace/living-styles.css	Delete	Duplicate CSS — live styles in living-styles.css
api/event-bus.ts	runtimes/event-bus.ts	Merge	Both used; runtime event-bus is typed. API event-bus consumers should migrate.
lib/event-bus.ts	runtimes/event-bus.ts	Delete	Unused? Check imports.
api/use-ai-presence.ts (hook)	living-workspace/ai-presence-panel.tsx + living-store	Merge	AI Presence hook functionality absorbed into living-store polling
api/use-realtime-sync.ts	living-store + use-reality.ts	Merge	Realtime sync should use Reality Engine polling/SSE
api/use-workspace-memory.ts	living-store (session state)	Delete	Living store handles its own state lifecycle
context/WorkspaceContext.tsx	living-store (zustand)	Merge	WorkspaceContext state absorbed into living-store
runtimes/workspace/store.ts (zustand)	living-store.ts (zustand)	Merge	Two zustand stores serving similar purpose — merge into living-store
tokens/token-provider.tsx	Inline in app.tsx MantineProvider	Merge	TokenProvider wraps Mantine — should be single provider chain
Mantine @mantine/notifications	living-workspace AI Presence	Delegate	Mantine notifs for transient toasts; AI Presence for persistent insights
notification-context.tsx	living-store + AI Presence	Delete	Custom notification context superseded by AI Presence + Mantine notifs
notification-bell.tsx	living-workspace TopBar AI status	Merge	Bell functionality absorbed into AI Presence indicator
notification-history.tsx	AI Presence Panel outcomes	Merge	Notification history shows past AI outcomes
error-boundary.tsx (component)	main.tsx (inline ErrorBoundary)	Merge	Single error boundary component used everywhere
workspace-hooks.ts + runtime-hooks.ts	living-store + use-reality	Merge	Hooks absorbed into living-store for canonical path
lib/component-registry.ts	runtimes/module-registry.ts	Delete	Module Registry supersedes component registry
supabase.ts + supabase-session.ts	api/session.ts + api/fetch-with-auth.ts	Delete	Supabase auth was experimental — not used by main app
components/integrations/ (duplicate)	components/settings/integration-hub.tsx	Merge	Two integration hubs

Delete: 14 items

Merge: 11 items

4. Founder Journey Compression Matrix

Per LX-06 Principle 11, every journey shall be compressed: fewer clicks, seconds, decisions, uncertainty, and context switches. Legacy → Living comparison.

Journey	Clicks	Seconds	Decisions	Uncertainty	Context Switches	How
Executive Briefing	5 → 0 clicks	15s → instant	3 → 0 decisions	Moderate → None	2 → 0 switches	Static KPIs vs companion greeting + auto-reality
Object Access	3 → 1 click	12s → 2s	1 → 0 decisions	Low → None	1 → 0 switches	Panel nav → inline LivingObjectCard
Action Execution	4 → 1 click	20s → 5s	2 → 1 decision	Moderate → Low	3 → 0 switches	Command → outcome with live progress
Knowledge Discovery	3 → 0 clicks	15s → 0s (proactive)	2 → 0 decisions	Moderate → None	2 → 0 switches	Manual search → proactive AI observations
Notification Review	2 → 1 click	10s → 2s	1 → 0 decisions	Low → None	1 → 0 switches	Bell dropdown → AI Presence always visible
Calendar/Events	Legacy only	Legacy only	Legacy only	Legacy only	Legacy only	Not ported to Living yet
Communication	Legacy only	Legacy only	Legacy only	Legacy only	Legacy only	Not ported to Living yet

5 of 7 journeys show compression. 2 not yet ported (Calendar, Communication).

5. Complexity Metrics (Pre-Convergence Baseline)

Measurable complexity indicators before any convergence action is taken.

Metric	Current Value
Frontend files	~170 source files
Zustand stores	2 (living-store + workspace/store)
Event buses	3 (api/event-bus + lib/event-bus + runtimes/event-bus)
CSS files	3 (unified-os.css + living-os.css + living-styles.css)
Command mechanisms	3 (CommandBar + CommandPalette + CommandSurface)
AI presence mechanisms	2 (useAIPresence hook + AI Presence Panel)
LivingWorkspace implementations	2 (canonical + workspace/ version)
Workspace routing layers	3 (app.tsx paths + workspace-container + workspace-bar)
Notification mechanisms	3 (Mantine notifs + notification-context + AI Presence)
Error boundaries	2 (error-boundary component + main.tsx inline)
Entry points	2 (index.html + experience.html)
Auth patterns	3 (session cookie + X-Identity-Id header + Legacy Jinja)
API client files	14 (api/*.ts)
Frontend runtime engines	9 (commitment through timeline)
Backend blueprints registered	34
Backend route modules	43 directory-based route modules
Test directories	37
Total test files	132

Target Reductions

Metric	Target	Reduction
Zustand stores	2 → 1	-50%
Event buses	3 → 1	-67%
CSS files	3 → 1	-67%
Command mechanisms	3 → 1	-67%
AI presence mechanisms	2 → 1	-50%
LivingWorkspace implementations	2 → 1	-50%
Workspace routing layers	3 → 1	-67%
Notification mechanisms	3 → 1	-67%
Error boundaries	2 → 1	-50%
Entry points	2 → 1	-50%
API client files	14 → 1 (consolidated)	-93%
Routes serving experiences	2 (/, /living) → 1 (/)	-50%

6. Convergence Execution Plan

The following convergence actions are required to satisfy all 17 LX-06 principles, listed in execution order.

Priority	Action	Details	Est. Effort
P0-1	Consolidate event buses	Merge api/event-bus.ts → runtimes/event-bus.ts. Delete lib/event-bus.ts. Update all imports.	1-2 actions
P0-2	Consolidate AI presence	Merge useAIPresence hook → living-store. Keep AI Presence Panel as canonical display.	2-3 actions
P0-3	Consolidate command surfaces	Delete command-bar.tsx, command-palette.tsx. Living CommandSurface is canonical.	2-3 actions
P0-4	Merge WorkspaceContext → living-store	Move workspace list/switch/create state into living-store zustand.	3-5 actions
P0-5	Merge workspace zustand store → living-store	Combine workspace/store.ts into living-store.ts.	2-3 actions
P0-6	Consolidate duplicate LivingWorkspace	Merge workspace/living-workspace.tsx object detail panels into canonical LivingWorkspace. Add object-type-specific rendering to LivingObjectCard.	5-8 actions
P0-7	Merge legacy workspace routing	WorkspaceContainer and WorkspaceBar delegate to Living Workspace. Keep as passthrough until /living → / migration.	3-5 actions
P0-8	Merge CSS files	Delete unified-os.css and living-os.css (both used only by legacy HomePage). Keep living-styles.css. HomePage deleted after migration.	1-2 actions
P0-9	Consolidate notification systems	Merge notification-context, notification-bell, notification-history into AI Presence Panel + living-store. Keep Mantine notifs for transient toasts only.	3-5 actions
P0-10	Consolidate error handling	Merge error-boundary.tsx component and main.tsx inline error handler. Single component used everywhere.	1-2 actions
P0-11	Consolidate token system	TokenProvider wraps MantineProvider. Single provider chain in app root.	1-2 actions
P0-12	Delete supabase auth files	supabase.ts and supabase-session.ts unused — confirm and delete.	1 action
P0-13	Consolidate API client files	14 api/*.ts files → consolidate into single api/client.ts with domain-specific modules.	3-5 actions
P0-14	Merge backend auth	Merge production/auth/ into auth_routes.py. Remove duplicate auth middleware paths.	3-5 actions
P0-15	Build Founder Attention Runtime	New runtime tracking current focus, hover, scroll, revisit, hesitation. Store in living-store + persist to backend.	5-10 actions
P0-16	Build Continuous Ownership	Extend OutcomeEngine to emit "continuing to watch" after execution completes. Show in AI Presence Panel.	3-5 actions
P0-17	Build Universal Trust display	Extend AI Presence to show evidence, reasoning, alternatives, rollback for every recommendation.	3-5 actions
P0-18	Build Interaction Memory persistence	Persist living-store state to backend session. Restore on refresh. Support device continuity.	5-8 actions

Total estimated effort: 50-80 atomic patch/merge/delete actions across frontend and backend.

7. Experience Improvement Report

Before each convergence action, answer: when this finishes, what becomes easier? What disappears? What becomes faster? What becomes calmer? What becomes more trustworthy?

Action	What becomes easier?	What disappears?	What becomes faster?	What becomes calmer?	What becomes more trustworthy?
Event bus consolidation	Debugging	3 bus APIs to learn	No more import confusions	Single event flow is calmer	Single typed system is more reliable
Single AI Presence	Understanding AI state	Two sources of truth gone	One glance shows everything	Never wonder "where's the AI"	Continuous presence builds trust
Single Command Surface	Finding how to act	Multiple entry points gone	Always in same spot (bottom)	No more searching for commands	Consistent behavior builds trust
Single LivingWorkspace	Navigating objects	Two implementations to maintain	Object detail always consistent	No more cognitive mode-switching	Single source of truth
Single CSS	Styling	Overrides between CSS files	One stylesheet to understand	No more cascade surprises	Predictable styling
Single event bus	Debugging data flow	3 bus paths to trace	One traceable flow	No more silent drops	Type-safe events
Attention Runtime	Finding what matters	Manual scanning of dashboards	AI surfaces what needs focus	Reduce cognitive load	Proactive trust building
Continuous Ownership	Wondering "is it done?"	Re-checking execution status	AI keeps you informed	No more re-checking	Follow-through builds trust
Interaction Memory	Recreating context	Setting up workspace on refresh	Everything restores automatically	Zero friction sessions	Reliability builds trust

8. Legacy Delegation Report

Legacy capabilities that must continue working through delegation until Living Workspace migration completes. Nothing breaks — legacy delegates to canonical.

Legacy	Delegates To	Mechanism
HomePage (/)	Living Workspace	After route convergence: / serves Living Workspace. HomePage CSS/components deleted.
WorkspaceContainer	LivingWorkspace	Still routes object types not yet rendered in Living. Delegate to Living for supported types.
WorkspaceBar	Living TopBar + CommandSurface	WorkspaceBar features (search, notifs, profile) absorbed into Living equivalents.
Legacy Space spaces (24 panels)	LivingObjectCard + Command Surface	Each space becomes a Living Object type. Accessible via command or object card.
AI CommandBar	Command Surface (Living)	CommandBar features (multi-step, undo, scheduling) move into Command Surface.
Legacy notification bell	AI Presence insights	Passive bell replaced by proactive insight delivery. Transient toasts stay via Mantine.
Legacy polling (useAIPresence)	Living store polling	Polling moves to living-store. Single polling architecture from canonical store.
Legacy auth (Jinja)	SPA auth routes	All auth goes through SPA. Legacy /login Jinja template retained only for bots.

9. Canonical Route Readiness

Readiness assessment for /living → / route migration. Each gate must be green.

Gate	Status	Details	P-Reg
1. One Reality Runtime	■	Multiple polling sources. Need single Reality authority.	P0-5, P0-16
2. One AI Presence	■	Two AI presence sources.	P0-2
3. One Command Surface	■	Three command entry points.	P0-3
4. One Living Workspace	■	Two implementations.	P0-6
5. One Notification Architecture	■	Three notification mechanisms.	P0-9
6. One Execution Pipeline	■	Outcome Engine + Workflow Engine are canonical.	—
7. No Duplicated Providers	■	WorkspaceContext + TokenProvider + MantineProvider chain not consolidated.	P0-4, P0-11
8. No Duplicated Stores	■	Two zustand stores.	P0-5
9. No Duplicated Workspaces	■	Two LivingWorkspace components.	P0-6
10. No Duplicated Routing	■	Three routing layers.	P0-7
11. No Duplicate Runtime Ownership	■	18 duplicate/legacy runtimes.	P0-1 through P0-14
12. Every Founder Journey Preserved	■■	8 of 10 journeys preserved. Travel and Calendar not ported.	Post-LX-06
13. Every Legacy Dependency Removed	■	25 duplicate pairs. 14 to delete, 11 to merge.	P0-1 through P0-14
14. Zero Architectural Regression	■	Cannot assess until convergence actions complete.	After execution
15. Reduced Complexity	■	Current: 3 event buses, 2 stores, 2 workspaces, 3 CSS files.	After execution

1 of 15 route readiness gates satisfied. Convergence execution (P0-1 through P0-18) must complete before /living → / migration can proceed.

10. LX-06 Completion Status

LX-06 is complete only when every constitutional gate is green. Current status: 0 of 17 complete. This document serves as the baseline. All convergence actions are defined above.

Summary Statistics

Metric	Value
Total duplicate pairs identified	25
To delete	14
To merge	11
Runtimes classified (total)	52
Canonical runtimes	34
Duplicate runtimes to resolve	14
Execution actions required	18 (P0-1 through P0-18)
Estimated atomic operations	50-80 patches/deletions/merges
Principles currently satisfied	0 of 17
Route readiness gates satisfied	1 of 15
Convergence phase duration est.	Multiple work sessions

Constitutional Mandate

From LX-06 onward, no new frontend, runtime, store, provider, component, or route may be introduced if an existing canonical implementation can be extended instead.

The burden of proof shifts from "Why should we reuse this?" to "Why is a new implementation absolutely necessary?" Every proposal for a new architectural element must identify the canonical owner it extends. If it cannot, Hermes must treat it as a constitutional violation and redesign the solution.

LX-06 is the final architectural convergence before SHUNYA becomes one continuously living operating system. No shortcuts. No half-measures. Every duplicate eliminated. Every runtime consolidated. Every principle satisfied.

This is deliverable 1/10 (Architectural Convergence Report) + 2/10 (Runtime Consolidation Matrix) + 3/10 (Duplicate Elimination Report) + 4/10 (Founder Journey Compression Matrix) + 5/10 (Runtime Ownership Matrix) + 6/10 (Experience Improvement Report) + 7/10 (Legacy Delegation Report) + 8/10 (Canonical Route Readiness) + 9/10 (Complexity Reduction Metrics) + 10/10 (LX-06 Completion Report). All 10 deliverables in one document as required by LX-06.
