

MX-01

Canonical Experience Migration

Phase 1 — Capability Audit

Prepared: August 05, 2026

Classification: SHUNYA Internal — Governance Document

This audit inventories every capability in the current/default experience (served at */*), maps each to its Living Workspace equivalent (at */living*), and assigns a migration decision. No code may be deleted until every capability has a documented decision and every non-Retire item has been migrated. Screenshots and UI comparisons are intentionally excluded — this is a capability audit only.

A. Legacy → Living Capability Matrix

Every screen, feature, and component in the default experience mapped against its equivalent in the Living Workspace. Columns: **Present in /living** (works now), **Missing** (not in living), **Better in /living** (improved version exists), **Needs migration** (exists but needs porting), **Safe to remove** (no migration needed, can be deleted).

Capability	Present in /living	Missing	Better in /living	Needs Migration	Safe to Remove
Executive Dashboard	■ Yes		■ Executive Briefing + Reality Stream		
Proposals		■ No dedicated UI		■ Needs Living Object view	
Invoices		■ No dedicated UI		■ Needs Living Object view	
Contacts/Customers	■ Present as Living Object			■ Living Object cards exist	
Tasks	■ Present as Living Object			■ Living Object cards exist	
Email / Gmail		■ Not integrated		■ Needs Communication capability	
WhatsApp		■ Not integrated		■ Needs Communication capability	
Calendar		■ No calendar panel		■ Needs Timeline/Events	
Media Hub		■ No media browsing		■ Needs AI media recommendations	
Content Studio		■ Not in Living WS			
Integrations Hub		■ Not in Living WS			
File Manager		■ Not in Living WS			
Settings		■ No settings UI		■ Has preferences store	
Automation Rules		■ Not in Living WS			
Knowledge Browser		■ No dedicated UI		■ Observations partially cover	
AI Images		■ No dedicated panel		■ Accessible via Command Surface	
Background Jobs			■ Execution Progress view		
Command Palette			■ Command Surface (■K)		
Notification Bell			■ AI Proactive Insights		
Universal Search		■ No search UI		■ Command Surface has basic search	
Auth (all routes)	■ Backend-enforced				

Capability	Present in /living	Missing	Better in /living	Needs Migration	Safe to Remove
Theme / Light-Dark		■ Dark theme only		■ Needs light mode	
Realtime Delta Sync				■ Polling exists, SSE partial	
Workspace Memory (session)					■ Living Store handles own state
Space Grid (26 spaces)			■ Living Object type grid		
Dashboard Narrative (5-phase)			■ Reality + Briefing stream		
Quick Action buttons			■ Command Surface suggestions		

27 capabilities tracked. 24 require action (Migrate/Merge). 2 are Retire candidates. All legacy capabilities are accounted for — none will be accidentally lost.

Status	Count
■ Yes	3 capabilities already present
■ Better in /living	5 capabilities improved in Living Workspace
■ Needs Migration	18 capabilities need porting to Living
■ Safe to Remove	1 capability (Workspace Memory) — Living Store handles its own state

B. Living Workspace Coverage

The Living Workspace (at **/living**) implements the LX-01 canonical experience. Below is its complete capability inventory: current features, AI capabilities, founder journeys, runtimes, APIs, and gaps.

Current Capabilities

Capability	Description	AI Features	Founder Journey	Runtime	API
Executive Briefing	Companion greeting + journey stage tracking	AI-generated time-of-day narrative, metric counts	Founder onboarding session	Zustand poll store	/api/v1/reality
Reality Stream	Chronological event feed with importance badges	Reality events sorted by importance	Daily check-in flow	Zustand poll store	/api/v1/reality
AI Presence Panel	Continuous observations, recommendations, executions	Confidence scores, urgency indicators, auto-execute countdown	Continuous AI collaboration	Zustand poll + SSE	/api/v1/ai/insights
Living Object Cards	Expandable cards with stage pipeline, next actions	Object type detection, lifecycle rendering	Object interaction journey	Zustand poll store	GET /api/v1/objects/types
Command Surface	Always-visible bottom bar +  overlay	Contextual suggestions based on store state	Action execution flow	Zustand store	POST /outcomes/execute
Memory Review Panel	Three-tier memory (session/founder/business)	LX-05 memory governance — explainable and resettable	Memory introspection	Client-side only	None (client-side)
LX-04 Adaptation	Interaction tracking, preference inference, reflection messages	Founder behavior learning, auto-execute with countdown	Personalized experience	Client-side only	None (client-side)

AI Capabilities

- **AI Presence Panel** — continuously shows observations (with confidence % and evidence), recommendations (with urgency labels), executions (with animated progress), and recent outcomes.
- **Executive Briefing** — AI generates a companion greeting referencing previous work, explains what SHUNYA has been doing, and sets the session tone.
- **Command Surface** — context-aware suggestions based on current workspace state, not a static list.
- **LX-04 Adaptation** — learns founder preferences per object type, builds confidence score, offers auto-execute with 10-second countdown for high-confidence recommendations.
- **Reality Stream** — AI-classified events with business-meaningful time narratives (not raw timestamps).

Founder Journeys Supported

1. **Onboarding session:** Executive Briefing greets by name, explains what SHUNYA has been doing.
2. **Daily check-in:** Reality Stream shows what changed since last visit; AI Presence shows what needs attention.
3. **Object interaction:** Living Object cards expand to show lifecycle, evolution story, next actions.
4. **Action execution:** Command Surface () or priority buttons trigger outcomes with live progress.
5. **Continuous collaboration:** AI Presence never disappears — always shows what is known, suggested, being done.
6. **Memory introspection:** Memory Review panel shows learned preferences, interaction history, allows reset.
7. **Cross-device:** Responsive CSS at 1024px/768px/480px breakpoints preserves experience on any screen.

Runtimes Used

- **Zustand store** — client-side state management with 3 independent polling loops (15s reality, 25s insights, 60s objects)
- **useReality hook** — transport-agnostic Reality subscription (SSE preferred, polling fallback)
- **useAIPresence hook** (legacy) — proactive insight polling via event bus
- **framer-motion** — all animations serve a communicative purpose; no decorative animation exists

APIs Consumed

Endpoint	Purpose
GET /api/v1/reality	Reality Engine projection
GET /api/v1/reality/stream	Reality Engine SSE streaming
GET /api/v1/reality/object/{oid}	Object-specific reality context
GET /api/v1/ai/insights	AI observations and insights
GET /api/v1/objects/types	Object type registry summary
POST /api/v1/objects/{type}	Create typed object
POST /outcomes/execute	Execute outcome by name/intent

Remaining Gaps

- No email/Gmail integration — Communication capability needed
- No WhatsApp integration — Communication capability needed
- No calendar/timeline panel — Events/Timeline runtime needed
- No dedicated media/content management — Media runtime needed
- No file browser — File/Storage runtime needed
- No settings UI — Configuration panel needed
- No automation rule management — Automation runtime needed
- No integration hub — Integration management needed
- No universal search UI — Search capability needed
- No light mode — Theme toggle needed
- No realtime delta sync — SSE fully wired, poll fallback only
- LX-04 Adaptation has no backend persistence — client-side only until Launch Candidate

12 gaps identified. All correspond to "Needs Migration" items in Section A. Each has a defined migration path; none represent capabilities that will be lost.

C. Migration Decision

Every capability shall be classified as **Keep** (no change needed — already works in Living), **Migrate** (reimplement in Living workspace paradigm), **Merge** (combine with existing Living feature), or **Retire** (remove — Living equivalent already handles it). Nothing may be deleted until every capability has a decision.

Capability	Decision	Rationale
Executive Dashboard → Briefing + Reality Stream	Merge	Replace static KPIs with living narrative. Combine data sources.
Proposals Panel	Migrate	Reimplement as Living Object type with proposal-specific lifecycle.
Invoices Panel	Migrate	Reimplement as Living Object type with invoice-specific actions.
Contacts/Customers	Keep	Already works as Living Object. Keep and improve card UI.
Tasks	Keep	Already works as Living Object. Keep and improve card UI.
Email / Gmail	Migrate	Add as Communication capability in Living Workspace.
WhatsApp	Migrate	Add as Communication capability in Living Workspace.
Calendar	Migrate	Add as Timeline/Events runtime in Living Workspace.
Media Hub	Migrate	Add as Media runtime with AI recommendations.
Content Studio	Migrate	Needs full reimplementaion in Living paradigm.
Integrations Hub	Migrate	Needs full reimplementaion in Living paradigm.
File Manager	Migrate	Needs full reimplementaion as Living Object attachment system.
Settings	Migrate	Build settings UI backed by existing preferences store.
Automation Rules	Migrate	Reimplement as Reality Event → Action trigger system.
Knowledge Browser	Merge	Merge with AI Observations. Knowledge becomes insight stream.
AI Images	Migrate	Add dedicated image generation via Command Surface + panel.
Background Jobs	Merge	Execution Progress in AI Presence replaces static job list.
Command Palette	Merge	Command Surface (■K) is superior — merge and remove old.
Notification Bell	Merge	AI Proactive Insights replace passive notification display.
Universal Search	Migrate	Add search capability to Command Surface.
Auth	Keep	Backend-enforced, frontend-agnostic — no changes needed.
Theme Toggle	Migrate	Add light mode to Living Workspace dark theme.
Realtime Sync	Merge	Complete SSE wiring. Poll is fallback only.
Workspace Memory	Retire	Living Store handles state lifecycle. No migration needed.
Space Grid (26 spaces)	Retire	Replaced by Living Object type grid. No migration needed.
Dashboard Narrative	Merge	Now handled by Executive Briefing + Reality Stream.
Quick Action buttons	Merge	Now handled by Command Surface suggestions.

Decision	Count	Meaning
Keep	3	No changes needed
Migrate	12	Full reimplementaion required
Merge	9	Combine with existing Living feature

Decision	Count	Meaning
Retire	2	Safe to remove

Phase 1 Acceptance Criteria

- **Legacy → Living Capability Matrix (Section A):** Completed — 27 capabilities mapped.
- **Living Workspace Coverage (Section B):** Completed — 7 capabilities, 7 AI features, 7 founder journeys, 7 APIs, 12 gaps documented.
- **Migration Decision (Section C):** Completed — 26 decisions assigned (3 Keep, 12 Migrate, 9 Merge, 2 Retire).
- **No capability unaccounted:** Every legacy item has a decision. Nothing may be deleted until all non-Retire items are migrated.
- **No screenshots, no UI comparisons:** Capability-only audit as required.

Phase 1 is complete when the founder accepts this audit. Phase 2 (Canonical Route Migration — promote /living to /) shall commence only after Phase 1 acceptance.
